Board of Architectural Review (BAR)
Certificate of Appropriateness

Please Return To: City of Charlottesville
Department of Neighborhood Development Services
P.O. Box 911, City Hall
Charlottesville, Virginia 22902
Telephone (434) 970-3130 Fax (434) 970-3359

Please submit ten (10) copies of application form and all attachments.
For a new construction project, please include $375 application fee. For all other projects requiring BAR approval, please include $125 application fee. For projects that require only administrative approval, please include $100 administrative fee. Make checks payable to the City of Charlottesville.
The BAR meets the third Tuesday of the month.
Deadline for submittals is Tuesday 3 weeks prior to next BAR meeting by 4 p.m.

Owner Name: RANdom Associates Applicant Name: Tom Romer
Project Name/Description: Window Replacement Parcel Number: 320162000
Property Address: 102 7 ST. NW Charlottesville VA 22902

Applicant Information
Address: 1117 Richland DR
Charlottesville VA 22903
Email: tomromer@aol.com
Phone: (W) 434 531 1070 (H)
FAX: 434 817 7410

Signature of Applicant
I hereby attest that the information I have provided is, to the best of my knowledge, correct. (Signature also denotes commitment to pay invoice for required mail notices.)

Signature: [signature] Date: 8-26-14

Print Name: Thomas H. Romer Date: 8-26-14

Property Owner Information (if not applicant)

High-Performance Sun* Low-E Tempered Dual-Pane Insulating	0.32	0.26	0.30	40%	30

"High-Performance" (HP Low-E) and "High-Performance Sun" Low-E (HP Sun) are Andersen trademarks for "Low-E" glass.

Based on NFRC testing/simulation conditions using Windows 4.1 and NFRC validated spectral data. 0°F outside temperature. 70°F inside temperature and a 15 mph wind.

1 U-Factor is a measure of the heat loss through the glass in BTU/hr deg.F sq. ft.

2 Solar Heat Gain Coefficient (SHGC) defines the fraction of solar radiation admitted through the glass both directly transmitted and absorbed and subsequently released inward. The lower the value, the less heat is transmitted through the glass.

3 Visible Transmittance (VT) measures how much light comes through the glass. The higher the value, from 0 to 1, the more daylight the glass lets in. Visible Transmittance is measured over the 380 to 760 nanometer portion of the solar spectrum.

DP upgrade option available. Contact your Andersen dealer for availability and other details.
